Shane H Bolding

484 Stillwell Blvd. Crestview, FL

(770) 680-9557 | Shane.B.Engineer@gmail.com

Education

University of West Florida *Pensacola, FL*

Bachelor of Science in Computer Engineer, GPA: 3.22 *May 2020*

University of West Florida *Pensacola, FL*

Bachelor of Science in Electrical Engineer, GPA: 3.43 *May 2020*

Skills and Experiences

Languages C, C++, HTML, Phython, Java, VHDL, Assembly, Spanish (basic), Japanese (basic)

IDEs Arduino, Dev-C++, AWS, Ecllipse, Visual Studios, Vim

Work Ethic I ensure you I will be your best employee by the end of the month

University of West Florida *Pensacola, FL*

Tutor *Aug. 2019 - May 2020*

- Educated a myriad of students in any subject that fell underneath the degrees of Computer/Electrical Engineering or Computer Science
- Collected multiple different perspectives of many subjects under my degrees
- revamped and reviewed everything that I have learned during college career
- reinforced everything that I have learned with the ability to explain these things in simplistic way

Full Time Student *Pensacola, FL*

Worked overtime for free *Aug. 2015 - May 2020*

- Always took to my assignments like failure wasn't an option because it really wasn't
- In order to get two degrees at once I couldn't fail anything after I made a mistake failing one class as a freshmen
- Attained the skills needed to learn two and sometimes three different categories a semester
- Never striven for less than an A and some semesters worked 60+ hours a week

Projects and Abilities

Capstone

- Constructed a robot with my teammates to enter a Southeastern Conference International Electrical Engineers competition in order to exercise my collected knowledge from my degree
- Instructed the robot to find color coded Lego blocks to stack in the color coded numbers of pi in under three minutes during the competition
- Manipulated algorithms to make the robot run as smooth and as fast as it could during the allocated time of the contest

Altera DE1 Calculator

- Engineered a calculator using the Altera DE1 programmable board and VHDL.
- Implemented full use of the boards dip switches and 8-segment LED's.

Band Limited Channel W/ Equalization

- Crafted a circuit that created a band limited channel to send a signal.
- Created a circuit that then equalized the signal to read from the channel.

Traveling Salesmen Solution

- Constructed a program that found the solution of the quickest path a salesmen should take out of a multitude of options.
- Implemented clean and commented code as for ease of teamwork.

Pattern Recognition

- Assembled an AI that could recognize between 20 fish with 97 percent accuracy.
- Crafted a self learning self learning algorithm that determined the best and most accurate AI system
